Insert for containers for washing containers and lids placed on edge.

Stainless steel drip tray used with trolleys and tables to prevent dripping on the floor and on table cloths.

Cover grid to be used when washing lightweight items.

Insert for cup to keep the cups tilted for a better drying result.

BASKET PRINTING

By a unique system, Nordien-System can offer printing/coding of baskets. The printing/coding can indicate different glasses, own logo or address and is available in different colours. The printing/coding is ideal for catering and large banquet operations as well as for small restaurants with a large variety of glasses.

Ask for options.

We can also supply customer adapted plate cassettes on request.

PLATE CASSETTES

The cassettes are used in all handling and storage of clean and dirty crockery. They protect the edges of the crockery from becoming chipped during transport and they drastically reduce the crockery breakage. The cassettes can be used in hot cupboards, max 50°C and washed in a dishwashing machine. Height: 30 cm. Made of coated steel wire. Available in eleven sizes.

Plate cassettes are colour coded.

THE ONLY DISHWASHING BASKET DEVELOPED WITH THE SERVING STAFF IN MIND

A glass basket spends more than 99 % of its time outside the dishwashing machine; that is why it should not be constructed solely for that purpose. Metos Nordien-System is the only company in the world that has paid attention to that fact. For more than 30 years the 46 cm basket system has been developed and improved in close co-operation with operators all over the world.

Thanks to the smaller dimension of the 46 cm basket, together with round corners and soft edges, the serving staff can carry the basket on their arm, at the same time putting glasses on the tables. The smart construction and the colour options also make it possible to use the basket within the restaurant and bar areas.

The 46 cm baskets are also ideal in the storage area. The low sides not only enable easy identification but also give a much larger storage capacity as the distance in height between the baskets can be reduced to a minimum and still give easy access to the glasses. The low sides also drastically reduce the breakages during handling.

When the 46 cm basket goes through the dish-washing machine it is placed in an open dish-washing basket (50 cm). When Metos Nordien-System open 50 cm baskets are used the 46 cm basket can be placed tilted for optimum wash and dry result.

1 Dirty goods are being picked up from the tables and carried out to the dishwashing area.

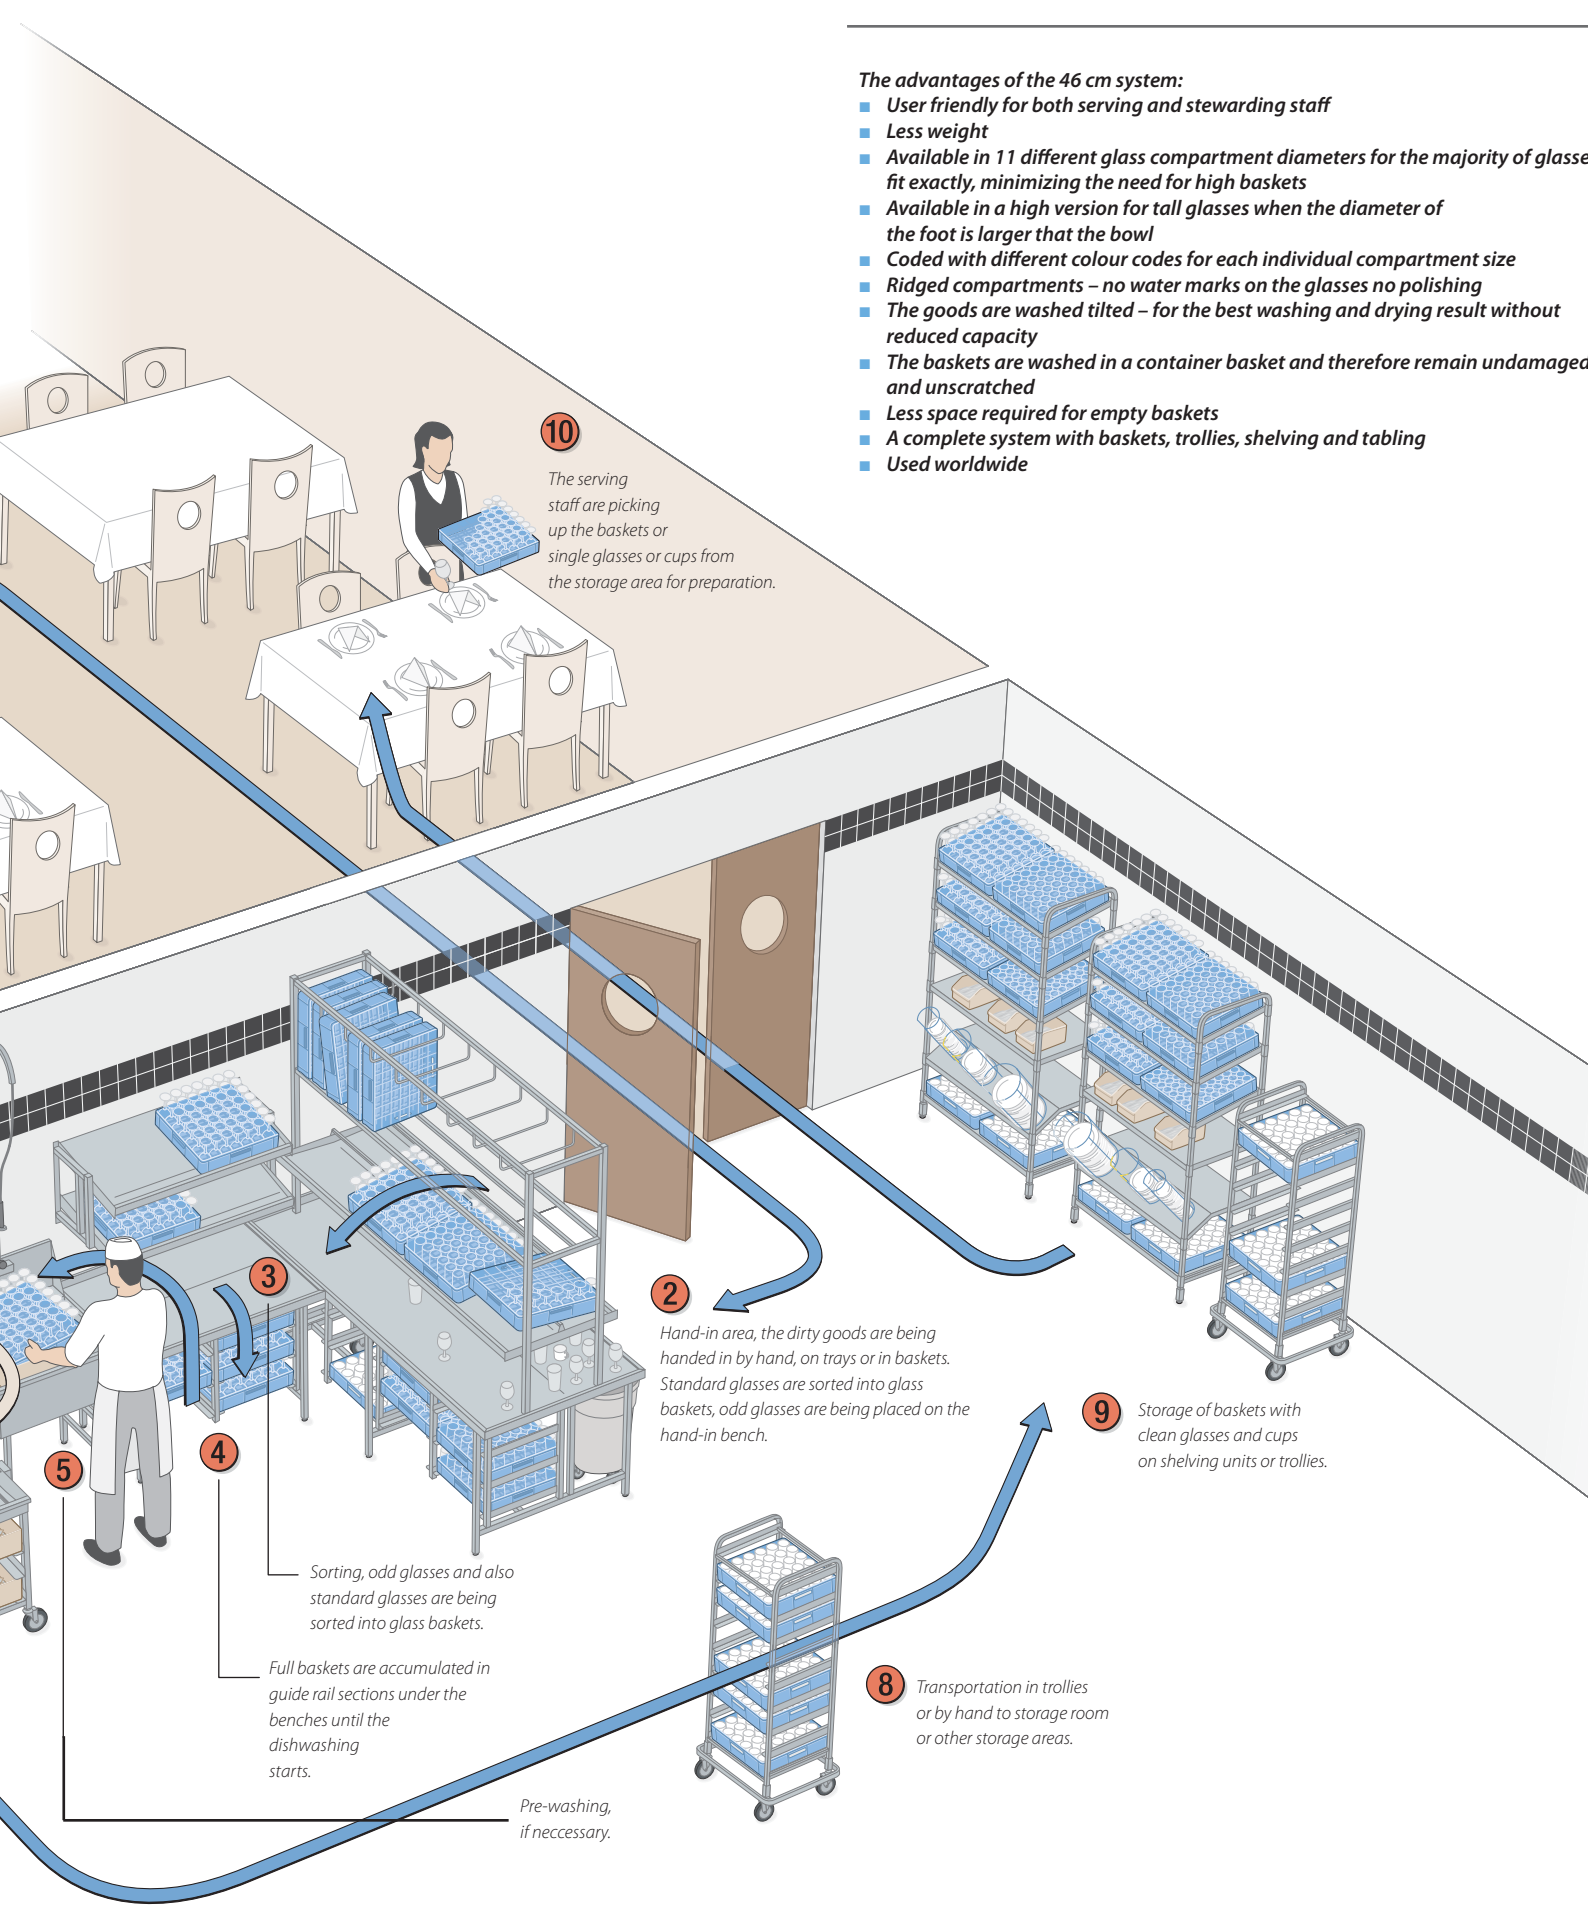

6 The dishwashing process.

7 Dripping/drying.

The container baskets (in which the 460 x 460 mm baskets are to be placed) are only used in the dishwashing machine. The empty container baskets can be stored under the drying line.

The advantages of the 46 cm system:

- User friendly for both serving and stewarding staff
- Less weight
- Available in 11 different glass compartment diameters for the majority of glasses fit exactly, minimizing the need for high baskets
- Available in a high version for tall glasses when the diameter of the foot is larger than the bowl
- Coded with different colour codes for each individual compartment size
- Ridged compartments – no water marks on the glasses no polishing
- The goods are washed tilted – for the best washing and drying result without reduced capacity
- The baskets are washed in a container basket and therefore remain undamaged and unscratched
- Less space required for empty baskets
- A complete system with baskets, trolleys, shelving and tabling
- Used worldwide

10
The serving staff are picking up the baskets or single glasses or cups from the storage area for preparation.

2
Hand-in area, the dirty goods are being handed in by hand, on trays or in baskets. Standard glasses are sorted into glass baskets, odd glasses are being placed on the hand-in bench.

3
Sorting, odd glasses and also standard glasses are being sorted into glass baskets.

4
Full baskets are accumulated in guide rail sections under the benches until the dishwashing starts.

Pre-washing, if necessary.

8
Transportation in trolleys or by hand to storage room or other storage areas.

9
Storage of baskets with clean glasses and cups on shelving units or trolleys.

RHIMA DISHWASHING BASKETS 460 X 460 MM

- For glasses and cups
- Small dimension with large capacity.
- Light weight – easy handling
- Prior to being placed in the dishwashing machine they are placed at an angle into a 500 x 500 mm basket
- Ridges in the compartments for optimum drying result
- Injection moulded polypropylene

The unique 460 mm compartment basket system from Metos Nordien-System is today used throughout the world. Thanks to its light weight and reduced size (460x460 mm), the serving staff can support the basket on the arm when laying up tables. As the compartment basket is placed in an open 500x500 mm basket for washing it will remain as new without scratches and can therefore also be used in bars and other guest areas. The angle of the basket during washing means that a perfect washing result is obtained and the drying is speeded up.

The picture shows the angle of the basket during washing.

Baskets are colour coded to indicate the glass diameter.

High compartment baskets are for glasses with a larger foot than bowl or very tall glasses.

Compartment basket for glasses and cups
The ideal basket for washing, carrying and storing glasses. Each glass is placed in a compartment to prevent breakage and scratches.
